

## Cybersecurity Policy of evosoft Hungary

Evosoft Hungary (evosoft) takes special care that all information generated through working with its business partners and the operation of the company is managed and stored safely.

To prevent the occurrence of risks related to the confidentiality, integrity and availability of privileged (business and project related) information and communication channels used in relations with business partners, evosoft has implemented and is operating, taking into consideration the relevant regulations by Siemens, an Information Security Management System which is integrated with its Quality Management System.

Main functions of the system:

- We provide appropriate information and training for our employees.
- We cooperate with the relevant departments of Siemens.
- We continuously monitor the risks threatening the company and its information assets.

To further ensure information asset protection, evosoft has created and is operating

- a Cybersecurity Organization in order to implement effective Information Security Management processes,
- a security risk management plan,
- a business continuity plan ensuring continuity of operations and smooth implementation of customer projects.

Our goals are

- to optimize the level of impending risks so that evosoft complies with Siemens and applicable local regulations,
- to balance the cost of risk prevention measures and possible damages arising from the occurrence of risks,
- continuous improvement in terms of Cybersecurity.

Budapest, June 2<sup>nd</sup>, 2020.
